

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is actually a hydraulic device which could allow the individual driving to maneuver the forklift without leaving the seat. They are made out of high quality materials and are designed to be able to endure the most challenging procedures and work environments. Side shifting units have the added ability to be able to laterally position the arms or the entire load so as to facilitate more exact lifting and position in a faster and much more effective manner.

The only one of its kind fork pocket design could enable the person operating it to be able to securely sway the unit's forks without any fear of damaging the positioning cylinders. This allows the worker the option to either execute simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be converted into fork positioners on existing units.
